                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     264 lTrpLeu***TrpLysValSerGlyPro***-ArgLeuProAsnLeuThrArgProCysS 284
of the TANGO proteins. Anti-TANGO antibodies are used diagnostically to monitor protein levels in tissue as a clinical testing procedure.

TANGO 330 shows homology to human Roundabout. TANGO 330 nucleic acids and proteins may be used to diagnose, treat and monitor disorders of the adrenal cortex e.g. hypoadrenalism, hyperadrenalism, and neoplasia. They can also be used to treat cell proliferative disorders (e.g. cancer), and neurological disorders e.g. Alzheimer's disease.

TANGO 330 is 1 of 4 novel human transmembrane proteins which also includes TANGO 316 (AAU00499-AAU00499), TANGO 437 (AAU00502) and TANGO 480 (AAU00503). The nucleic acids encoding these proteins are useful as modulating agents in regulating a variety of Cellular processes and can be used to express the proteins in a host cell in gene therapy applications. Antisense nucleic acid molecules and spreasing the transpoored containing the TANGO nucleic acids are also described. Diagnostic assays can be used to detect genetic alterations in the TANGO nucleic acids and to identify compounds that bind to or modulate activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to endothelial cell-specific molecule 4 (ECSM4), and the polynucleotide sequences encoding it. The ECSM4 proteins are useful for imaging vascular endothelium in the body of an individual, and for diagnosing and treating a proliferative disease or condition involving the vascular endothelium (preferably, neovasculature) such as cancer, psoriasis, diabetic retinopathy, atheroscie or menorrhagia. The ECSM4 proteins are also useful in the manufacture of diagnostic or prognostic agent for such conditions. The proteins are also useful for detecting endothelial damage or activation, detecting a tumour or tumour neovasculature, cardiac disease, or endometriosis by detecting the amount of ECSM4 present in a sample. The polynucleotide sequences encoding ECSM4 resusful in gene therapy for treating a hypoxic condition such as cancer, cardiac
              Novel endothelial cell-specific molecule polypeptide 1 or 4, useful imaging, diagnosing and treating a condition involving vascular endothelium e.g. cancer, cardiac disease, endometriosis, diabetes
                                                                                                                                                                                                              endothelial cell-specific molecule 4; ECSM4; neovasculature;

comprises: (a) an oligo-dT primer and an oligonucleotide complementary
to the complementary strand of a polynucleotide which comprises one of
the 5602 nucleotide sequences defined in the specification, where the
coligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5' end
complementary strand of a polynucleotide which comprises a 5' end
complementary strand of a polynucleotide which comprises a 5' end
sequence and an oligonucleotide comprising a sequence complementary to a
polynucleotide which comprises a 3' end sequence, where the
coligonucleotide which comprises a 1' end sequence, where the
coligonucleotide of the polynucleotides and the combination of
the specification. The primer sets can be used in antisense therapy and
in gene therapy. The primers are useful for synthesising polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
connection and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers allow obtaining of the full-length
cDNAs easily without any specialised methods. AAH03165 to AAH13628 and
AAH3633 to AAH18742 represent human comba sequences; and AAH13629 to AAH13632
crepresent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                220 CCCACCATCCGCTGGTTGCTGAATGGGCAGCCCCTGAGCATGGTGCCCCCAGACCCACAC

The present sequence encoding for human TANGO 330 form 2 is isolated from cDNA clone Jthxe181e12 from a human astrocyte cDNA clone Jthxe181e12 from a human astrocyte cDNA library. TANGO 330 is 1 of 4 novel human transmembrane proteins which also includes TANGO 315 (AAU00498-AAU00499), TANGO 437 (AAU00502) and TANGO 480 (AAU00503). The nucleic acids encoding these proteins are useful as modulating agents in regulating a variety of cellular processes and can be used to express the proteins in a host cell in care useful as modulating the TANGO nucleic acids are also described. CC hiagnostic assays can be used to detect genetic alterations in the TANGO nucleic acids and to identify compounds that bind to or modulate activity of the TANGO proteins. Anti-TANGO antibodies are used diagnostically to monitor protein levels in tissue as a clinical testing procedure. CC monitor protein levels in tissue as a clinical testing procedure. CC monitor protein may be used to diagnose, treat and monitor disorders of the adrenal cortex e.g. hypoadrenalism, hyperadrenalism, and neoplasia. They can also be used to threat cell proliferative disorders (e.g. cancer),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ValSerArgGlyAlaArgLeuSerValAlaValLeuArgGluAspPheGlnIleGlnPro 143

The present invention relates to the isolation of novel human PRO polypeptides, and the polymucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The bioactive molecule maybe a toxin, radiolabel or antibody, and causes bioactive molecule maybe a toxin, radiolabel or antibody, and causes bioactive molecule maybe a toxin, radiolabel or antibody, and causes capture molecule maybe a toxin, radiolabel or antibody, and causes apported immune disorders, diabetes or hyper- or hypo-insulinaemia, cardiac insufficiency, nervous system disorders, kidney disorders, cardiac insufficiency, nervous system disorders, and wound healing. The polymucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the generation analysis of individuals with genetic disorders, and in gene therapy. The present sequence encodes a human PRO polypeptide of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 GGAGGCATGGCTCAGGACTCCCCGCCCCAGATCCTAGTCCACCCCCCAGGACCAGCTGTTC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bloactive molecules to cells. AAC78600 to AAC78997 represent PCR primers and probes used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes secreted and transmembrane polypeptides and their polymucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coaquiation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ33891 to AAZ34338, and AAY41685 to AAY41774 represent polymucleotide and polypeptide sequence given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   43
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       83

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes a human protein kinase/protein phosphatase. The polypeptides are expected to participate in signal transduction in cells. The kinase phosphatases are connected with intracellular signalling pathways. Antisense oligonucleotides and compounds identified by screening (agonists or antagonists) can be used to treat human or animal disorders associated with the expression or function of the protein. In addition, the polypeptides may be used as target molecules fir drug development.

disease, or endometriosis by detecting the amount of ECSM4 present in a sample. The polynucleotide sequences encoding ECSM4 are useful in gene therapy for treating a hypoxic condition such as cancer, cardiac disease, endometriosis or atherosclerosis and in the manufacture of medicaments for treating the above disease. The sequences are useful for modulating angiogenesis in an individual. The present sequence encodes human ECSM4 protein.
                                                                                                                                                                                                                                                                            GlyThrAlaValSerArgGlyAlaArgLeuSerValAlaValLeuArgGluAspPheGln

The present invention describes primer sets for synthesising 5602

(full-length cDNAs defined in the specification. Where a primer set

comprises: (a) an oligo-dr primer and an oligonucleotide complementary

to the complementary strand of a polynucleotide which comprises one of

the 5602 nucleotide sequences defined in the specification, where the

coligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprises a 1-end sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprises a 3'-end sequence. Where the

complementary strand of a polynucleotide which comprises a form of

polynucleotide comprises at least 15 nucleotides and the combination of

the 5'-end sequence/3'-end sequence is selected from those defined in

the specification. The primer sets can be used in antisense therapy and

in gene therapy. The primers are useful for synthesising polynucleotides,

configurally full-length cDNAs. The primers are also useful for the

detection and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

configurally sithout any specialised methods. AAH03166 to AAH13628 and

AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to

AAH13633 to AAH13632 to AAH13632

configuration in the exemplification

configuration.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  694
                                                         The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate tags haematopoiesis e.g. to treat appliate the immune system e.g. to treat multiple sclerosis, to regulate the immune system e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. barkinson's disease. The present sequence is a coding sequence of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel endothelial cell-specific molecule polypeptide 1 or 4, useful for imaging, diagnosing and treating a condition involving vascular endothelium e.g. cancer, cardiac disease, endometriosis, diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to endothelial cell-specific molecule 4 (ECSM4), and the polynucleotide sequences encoding it. The ECSM4 proteins are useful for imaging vascular endothelium in the body of an individual, and for diagnosing and treating a proliferative disease or condition involving the vascular endothelium (preferably, neovasculature) such as cancer, psoriasis, diabetic retinopathy, atherosclerosis or menorhagia. The ECSM4 proteins are also useful in the manufacture of diagnostic or prognostic agent for such conditions. The proteins are also useful for detecting endothelial damage or activation, detecting a tumour or tumour neovasculature, cardiac

                                                                                                                                                                                                                         New polynucleotides and polypeptides useful for diagnosing, prognosing, treating or preventing e.g. neurodegenerative, central nervous system, autoimmune, respiratory, reproductive, or inflammatory diseases or
                                                                                                                                                                                                                                                                                                                                  The invention relates to novel genes (ABQ92553-ABQ92607) and proteins (ABP62013-ABP62153) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital, (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid archritis and ulcerative colitis; (c) cardlovascular disorders such as myocardial ischaemias;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CCCACCATCGCTGGTTGCTGAATGGGCCAGCCCCTGAGCATGGTGCCCCCCAGAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTCATCATGGGAGGCATGGCTCAGGACTCCCCGCCCCAGATCTTAGTCCACCCCCAGGAC 150
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAX51701-55 encode human secreted proteins. The polymucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Pathological conditions an also be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polymucleotides. Specific uses are described for each polymucleotide, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, immune disorders, infection, inflammatory disorders, skin disorders, tumours, atherosclerosis, crestenosis, trauma, spinal cord injuries, allergy, hematopoietic disorders, neurological disorders, arthritic disorders, asthmitic disorders, asthmitic disorders, asthmitic disorders, asthmitic disorders, asthmitical disorders, neurological disorders, arthritic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      90

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

Lead (15-NOV-2002) Human Genome Sequencing Center, Department Lecular and Human Genetics, Baylor College of Medicine, One Praza, Houston, TX 77030, USA

v 15, 2002 this sequence version replaced gi:23266067.

equence in this assembly is a combination of BAC based reads hole genome shotgun sequencing reads assembled using Atlas hole genome shotgun sequencing reads assembled using Atlas holy (a 'contig-seaffold'). Bach contig-scaffold, and sequence contigs are ordered and oriented, and separated add spilled with Ns to the estimated size. The sequence xend beyond the ends of the clone and there may be sequence set with a contig-scaffold that consist entirely of whole genome un sequence reads. Both end sequences and whole genome un sequence only contigs will be indicated in the feature

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "working draft" sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
